

## SOLUTION BRIEF

# OneVizion: Take Back Control. Build What You Need. Connect What You Have.

## The Problem:

Organizations managing large-scale infrastructure hit a breaking point. Spreadsheets fail. Commercial off-the-shelf solutions can't handle custom complexity. Homegrown systems can't rapidly scale and can create more problems than they solve. Teams work in silos. Data lives everywhere and nowhere. Critical decisions get made on incomplete and outdated information.

## Solution: OneVizion

Built specifically for infrastructure-heavy industries, the OneVizion platform centralizes everything - assets, permits, schedules, compliance, vendors, budgets, and workflows - into a single system of record that evolves with your business.

## The Technical Advantage:

### Linked Record Architecture®

Traditional platforms rely on Entity Relationship Diagrams (ERDs) to organize tables and data, leading to scaling issues, performance walls, and dead reports. OneVizion's breakthrough is Linked Record Architecture® where each data value exists in a record, not a static column.

## What It Does

- ✓ **Centralizes** scattered data across teams and programs
- ✓ **Connects** documents, tasks, vendors, budgets, and workflows in one system
- ✓ **Controls** business rules and status tracking through automation
- ✓ **Creates** enterprise-wide visibility and accountability

## This means:

- **Speed, scalability, and flexibility** unmatched by traditional SQL or NoSQL environments
- **Enhanced security** through multiple encrypted tables
- **Dynamic SQL** based on user selections, not hand-coded queries
- **Real-time adaptability** with virtualized columns that add new fields without schema rebuilds
- **Full indexing** across all data for instant access

**OneVizion is AI-Ready architecture.** Every action is logged (user, IP, SQL statement, resource accessed) enabling predictive insights, performance monitoring, and seamless AI integrations.

## Industry Solutions That Deliver

### ■ Fiber Providers

Track fiber builds by segment from permitting to punch list. Map, monitor, and forecast every detail across vendors and projects in one connected system.

### ■ Energy Developers

Keep projects on track from permitting to energization. Aggregate field data, utility updates, and interconnect milestones to spot delays early and hit go-live targets.

### ■ Tower Owners

Unify leases, maintenance, and site data into a single source of truth. Get a live, financial-grade view of your portfolio to track profitability and market available space faster.

### ■ Service Providers

Win more work and get paid faster. Track quotes, progress, and deliverables with full visibility from dispatch to closeout—eliminating spreadsheet sprawl that slows cash flow.

### ■ Wireless Carriers

Streamline deployments from site selection to small cell rollout. Centralize schedules, vendors, assets, and approvals for real-time visibility without spreadsheet chaos.

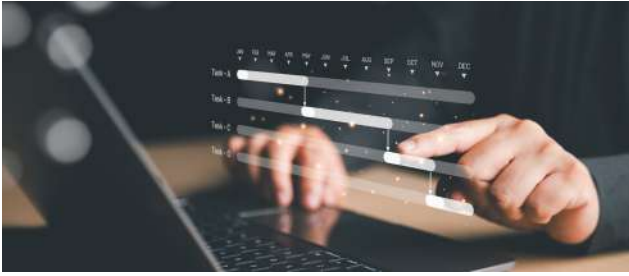

### ■ Utilities

Simplify grid modernization with centralized asset tracking and project oversight. Manage compliance, permits, and progress with configurable tools that fit your workflows.

## Proven at Enterprise Scale

- **\$70B+** Deployed Asset Value
- **5,000** Daily Users
- **1.5M** Reports Generated
- **50M** Documents Stored

## Platform Solutions

### ProjectVizion

End-to-end program management tracking schedules, documents, and costs across portfolios. Track budgets, auto-categorize files, and compare project performance

### TowerVizion

The system of record for tower operations. Unifies scattered data into a live, financial-grade view of every site in your portfolio.

### FiberVizion

Planning and tracking solution for fiber builds with detailed visibility into every segment across vendors, maps, and schedules.

### GridVizion

Built for utility-scale projects. Track transmission and generation builds with full visibility into status, cost, and coordination.

## Structure Without Rigidity

Unlike commercial off-the-shelf tools, OneVizion gives users control over the data model. Every item is stored independently and can be linked to anything else, enabling complex relationships while remaining built for change.

## Why Organizations Make **the Switch**

### From this:

- Scattered tools across departments and vendors
- Multiple versions of truth causing alignment issues
- Months-long development cycles for simple changes
- Manual follow-up and status hunting
- Technical overhauls for each expansion

### To this:

- Single platform replacing patchwork solutions
- Real-time data alignment across all stakeholders
- Changes implemented in days, not development cycles
- Automated accountability and transparency
- Seamless scaling across regions, vendors, and asset types

## The Bottom Line

OneVizion eliminates operational drag, reduces risk, and accelerates outcomes. Organizations move faster, work smarter, and stay coordinated as complexity grows - with the integrated foundation needed to operate efficiently at enterprise scale.

## About OneVizion

OneVizion is a low-code enterprise platform built to manage the complexity of large-scale infrastructure programs. Deployed across national and global initiatives, OneVizion is trusted by leaders who demand complete control over their operations.
