

SOLUTION BRIEF

GridVizion

Designed for utility operators, asset managers working with distributed OT infrastructure, GridVizion delivers near real-time visibility into assets, change events, compliance, and field activity. Instead of relying on spreadsheets, paper files, siloed systems, or outdated dashboards, GridVizion unifies the view. Whether you're tracking compliance activity on an ongoing basis for thousands of devices or preparing for an audit, it brings clarity, control, and confidence to your operations.

Key Capabilities

■ Accurate OT Asset Visibility

Automatically capture device-level details across substations — including non-IP assets hidden behind intelligent electronic devices (IEDs). GridVizion unlocks data normally trapped in OT networks, giving utilities a trusted asset inventory that supports daily operations and NERC compliance.

■ Embedded Compliance Workflows

NERC-aligned by design, GridVizion streamlines CIP-002, CIP-003, and CIP-010 compliance. Assets are classified, validated, and tracked against requirements, while work orders, changes, and evidence are linked in one platform to cut audit prep time and reduce risk.

■ Work Order Driven Change Control

Every configuration change connects directly to an approved work order. Integrity checks, validation steps, and post-change verification keep compliance on track. GridVizion flags discrepancies automatically and generates work orders for fast resolution.

■ Powerful Search and Reporting

Search by serial number, firmware version, panel, or CIP class. Run multi-criteria queries for targeted insights and generate audit-ready NERC reports with version control and full traceability — making audits faster and more reliable.

Why GridVizion?

- ✓ Built for Regulated Utilities
- ✓ Modular by Design
- ✓ Quick to Deploy On-Premise
- ✓ Intuitive to Use
- ✓ Trusted OT Asset Visibility

Key Benefits

Prevent Blind Spots: Gain a complete and accurate view of every OT device, so nothing is missed.

Strengthen Compliance: Link work to requirements with audit-ready records and traceable workflows that reduce audit prep and risk.

Detect Discrepancies: Track configuration changes, flag unauthorized activity, and automatically generate work orders to resolve mismatches.

Unlock Rich Asset Data: Securely use and leverage asset data trapped in OT networks, making it accessible for operations, compliance, and reporting teams.

Improve Team Coordination: Align engineering, compliance, planning, and field crews with shared workflows and live updates.

Is GridVizion Right for You?

If your day involves...

- Tracking OT assets across substations, crews, or service regions
- Tying field work to change control and compliance requirements
- Auditing past actions using spreadsheets and disconnected tools
- Preparing for CIP audits or tracking configuration changes manually

...then yes, GridVizion was built for you.

Request a Demo

See how GridVizion gives you control of every asset, every change, and every regulation—without the guesswork. OneVizion is built to adapt, engineered to scale, and ready for what's next. Are you? **Request a demo.**
